## GERMAN PLAN OF SUBJUGATION

People in Hostile Towns Are  
To Be Treated Civilly Un-  
der Conditions

GERMAN PLAN  
Berlin, Aug. 26.—The commanders of the German troops are issuing proclamation to the inhabitants of every hostile town they occupy as follows:

"Citizens—A good body of the German army under my command has occupied your city. Inasmuch as the war is carried on only between the armies in due form the life and private property of all inhabitants under the following conditions:

"1—The inhabitants must strictly avoid every hostile act against the German troops.

"2—Food and forage for our men and horses to be furnished by the inhabitants. Every such delivery will be paid for at once in coin, or a receipt will be issued to be redeemed after the termination of the war.

"3—The inhabitants are to house our soldiers and horses in the best manner, and to keep their houses lighted at night.

"4—The inhabitants are to put the roads in passible condition, to remove all obstacles erected by the enemy, and to give the best support to our troops in order that they may be able to fulfill their task, doubly difficult in the hostile land.

"It is forbidden to collect in crowds on the streets, to ring the bells or to communicate with the enemy in any way whatsoever.

"All weapons in the possession of the inhabitants are to be handed over at the town hall within two hours.

"The mayor, the clergymen, and four well-reputed citizens are to appear before me at once to act as hostages during the stay of troops. Under these conditions—I repeat it—the lives and private property of the inhabitants are perfectly secure. The strict discipline to which our soldiers are accustomed renders it possible that no inhabitant will be compelled to neglect his business affairs or to desert his home and hearth. On the other hand I shall adopt the most stringent measures as soon as the above conditions are observed. In this respect I shall hold the hostages in the first instance responsible. Besides this, every citizen will be shot who is found with a weapon in his hands, or committing any act whatever hostile to our troops. Finally, the entire city is responsible for the deeds of every individual citizen and the citizens will do well to keep mutual oversight over each other in order that they may avoid the unpleasant consequences that must follow upon any co-operation of the enemy."

As a consequence of the non-observance of such proclamations, a number of villages on the French frontier have been burned and the inhabitants severely punished.

Diary Head, Flattering Heart, Flattering Speech.

These are signs of kidney and bladder trouble. You'll have headaches too, backaches and be tired all over. Don't wait longer, but begin taking Foley Kidney Pills at once. It won't be long before your miserable sick feeling will be gone. You will sleep well, eat well and grow strong and active again. They are a tonic and your entire system as well as your kidneys and bladder will be benefitted by their use. Try them. Evans' Pharmacy, agents.

### KNOWN IN HONEA PATH

Georgia Man Ended His Life in His Own Store

Honea Path, Sept. 7.—The following items of interest in this section are taken from the Moultrie, Ga., Observer: J. S. Henderson ended his life Wednesday afternoon in his store in the presence of his clerk. The cause of rash act was trouble in business.

Miss Marie Kay, of South Carolina, left today for her home. Her many friends regret to see her leave, as she had made them by scores.

### Diarrhoea Remedy.

"I advised the boys when they enlisted for the Spanish war to take Chamberlain's Colic, Cholera, and Diarrhoea Remedy with them, and have received many thanks for the advice given," writes J. H. Householder, Eldon, Iowa. "No person whether traveling or at home should be without this great remedy." For sale by all dealers.

New Orleans, Sept. 7.—The cotton crop of 1913-14 was the most valuable ever raised by the South or any other cotton-growing section of the world. Including cotton seed, H. G. Hester, secretary of the New Orleans cotton exchange estimates that it brought \$1,114,592,238.

The average price for middling cotton during the year was 113 cents, while the average price was 85 cents \$58.05. The total value of cotton, exclusive of the seed was \$357,902,238.

### FLEEING FROM PARIS

Thousands Ordered to Leave by Military Authorities.

London, Sept. 7.—A Dispoche dispatch to the Evening Star says that the transportation of 25,000 people from the suburbs of Paris to the south and southeast commenced Sunday. These people were ordered to leave their homes by the military authorities so that the houses could be destroyed, leaving a clear range for the guns of the forts.

The residents of Neuilly and Joinville-le-Pont, as well as the vast population on the other sides of the city, were taken away on government trains. These people had hardly left their homes before refugees from the north arrived and occupied them. These, too, will be taken south.

## Scientific Farming

REMEDY FOR WHEAT PEST.

Oct Aphis Causes an Annual Loss of Thousands of Bushels.

[Prepared by United States department of agriculture.]

The little insect that causes an annual loss in this country of thousands of bushels of wheat and known as the "oat aphis" can scarcely be controlled when once it has gained headway. By proper precautions, however, serious outbreaks can be prevented. This insect often escapes notice, but it is probably the most widely distributed of the important plant lice which attack wheat and oats, and its depredations are only excelled by the so called "green bug."

As the oat aphis does not ordinarily appear suddenly in great swarms, as does the "green bug," it has never been considered a pest of great importance. It is easily overlooked by the casual observer, especially in the fall, when it occurs at the base of the plants and on the roots. However, it is usually always present on the wheat, and observations lead investigators to consider that these parasites weaken the plants and decrease the yield to an important extent, even though they may not be conspicuous and the decrease in yield not enough to be recognizable, as in the case of the "green bug."

The adult wingless insect is about the size of a pin head and is yellowish green to olive green in color. The winged insect has a black head, the abdomen being green and the antennae

THIS PEST THRIVES BEST IN WHEAT GROWING IN RANK.

black. The eggs are laid in crevices of the bark or between the leaf bud and twig of the apple tree and when first deposited are pale greenish in color. They soon change, however, to a shining black and retain this color until they hatch in the spring.

The oat aphis occurs on grains and grasses throughout the summer. The eggs are laid but once a year, in the fall. In the spring the eggs hatch, and throughout the summer there are sixteen or more generations produced all females. The last generation in the fall contains both males and females. As the weather becomes cooler some of the females seek the lower parts or roots of wheat and other plants of the grass family and here pass the winter, or the winged insects coming from the grain may seek such trees as the apple, the eggs laying females of this generation in turn depositing eggs on the twigs and branches.

The little wheat pest thrives best in rank growing grain, as in spots where manure piles of straw stacks have stood. These places are usually the center of infestation, and the lice may be found there even during the winter. Therefore the volunteer growth of wheat that occurs in the vicinity of straw stacks or manure piles should be plowed under or otherwise destroyed late in the fall in order to destroy the plant lice breeding thereon. In some cases it may be desirable to destroy this vegetation even earlier—that is, before the winter wheat is planted so at least before it makes any growth above ground.

The pasturing of cattle in wheat and oat fields in Oklahoma and Texas during the late fall or early winter has proved a desirable method of destroying the breeding places of the pest.

As in the case of many other grain pests, crop rotation is of much importance in the control of this aphis. Wheat fields should be located as far from the previous year's grain fields as possible, and especially should they be planted some distance from standing straw stacks. It is also advisable to plant grain as far as possible from apple and other trees which harbor the insect during the fall, winter and spring months.

Direct applications are hardly practicable in grain fields, but where only small areas are badly infested spraying with blackleaf-50 at the rate of one part of this insecticide to 500 parts of water, plus one pound of soap to each 100 gallons of spray liquid, will doubtless prove efficacious, provided the application is thorough.

The above remedial and preventive measures for this destructive parasite are all the more important because there is little hope of controlling it after it has once gained much headway and because, being so inconspicuous, it is liable to become present in great numbers before it is noticed.
